

→ Debugging.

→ Tracing

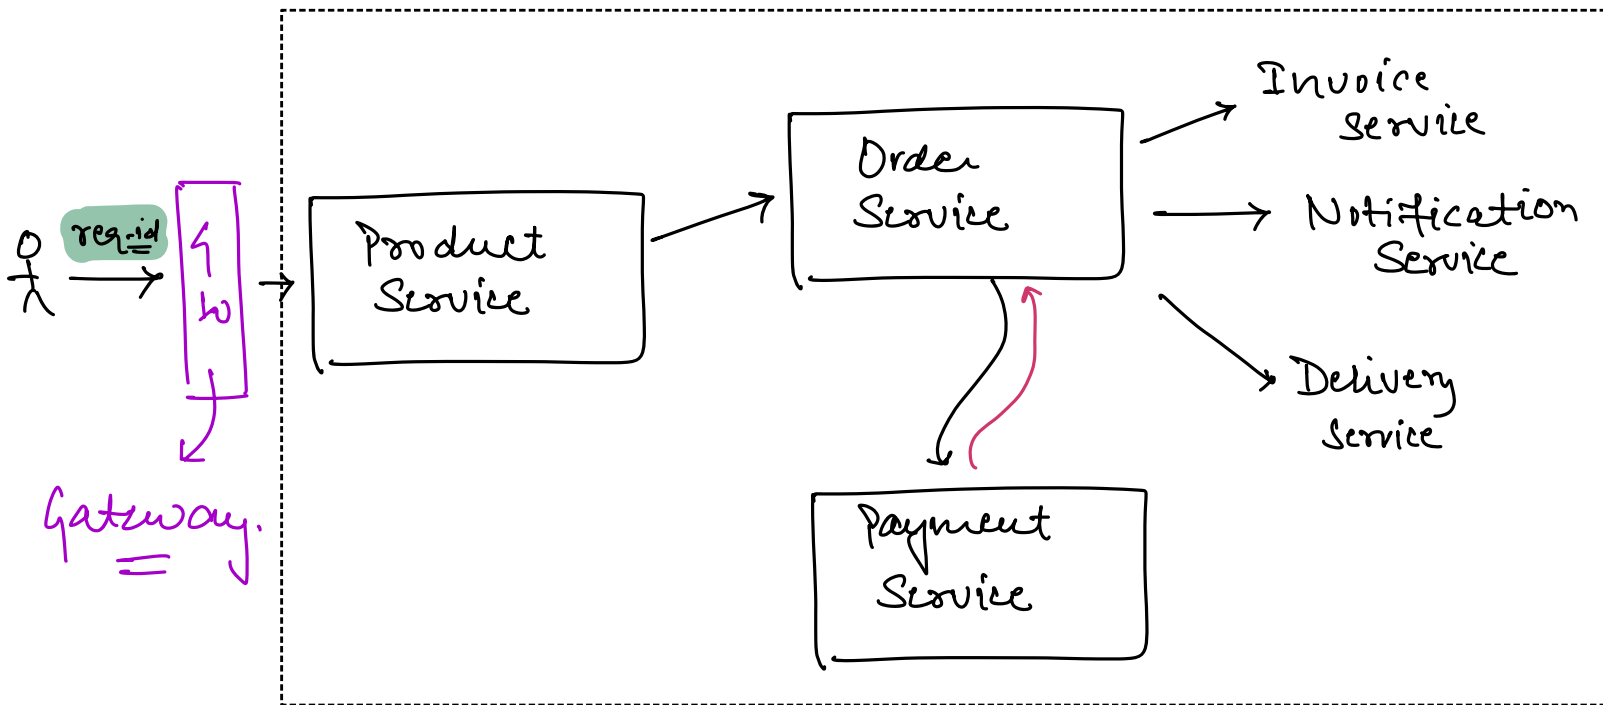

⇒ Every request is assigned a unique id at the time it enters the system.

⇒ Now this id can be used to filter out the traces/logs for this particular request.

request-id (OR)

trace-id (OR)

correlation-id

⇒ Grounding.

Performance Tracking.

→ Agent performance metrics.

1. Response time. (latency)

2. Accuracy

3. Tokens Count.

4. No. of tool calls.

5. No. of LLM calls.

6. Disk & Memory.

7. Error rates.
